

BARCODE SCANNING TECHNOLOGY

- Product and point of delivery tracking with electronic signature capture
- Management of delivery data, product information and inventory control
- Tracking of all pharmacy assets in the field including maintenance and depreciation
- Fast, efficient, on-site customer surveys. Improved performance, efficiency, reliability and reduced costs

Driven to offer the newest technology, RxSolutions, along with our business partners, TS-Tek and Business As Usual, developed the RxSolutions custom software system for the Long Term Care Pharmacy industry. Our impressive product line starts where pharmacy computer systems end.

RxSolutions is the most sophisticated yet easy to operate data collection and materials management software on the market today. Used in conjunction with our website, our state-of-the-art RxSolutions software will save your pharmacy time and money, while greatly increasing your customer's satisfaction with your services.

HOW IT WORKS

RxPod

The RxSolutions RxPOD software component provides wireless and real time 'proof of delivery' data of all your pharmacy's deliveries and customer returns of all medications, controlled substances and related pharmaceutical products.

RxTracking

The RxSolutions RxTracking software component is designed to capture and inventory all of your pharmacy assets in real time with a few clicks of a button. The software allows your pharmacy to track, store and report all your assets not only at your location, but in the field at your customer locations as well.

RxSurvey

RxSurveys, in just a few clicks on a PDA, instantly gives you the valuable information you need to help your pharmacy provide better service to your customers. Surveys are conducted on site at the point of delivery, and your courier transmits the results back to the pharmacy in real time.
